

# Apple Trees

(listed in ripening order)

## LindaMac®

LindaMac is a bright red, true McIntosh that starts coloring a month ahead of every other Mac. It finishes to a virtually 100% solid bright red blush with no striping. LindaMac has the crisp, sweet flavor and attractive appearance of a true Mac. No need to wait for the color to develop before you can pick, LindaMac is ready when you are!

---

## Honeycrisp™

Released by the University of Minnesota, this Honeygold X Macoun cross is a real crowd pleaser. The fruit is large and the skin is 50-90% red over yellow background. The flesh is cream colored and exceptionally crisp and juicy with a sub-acid flavor. The fruit generally ripens evenly allowing for a single picking. Ripening date is about one week after McIntosh.

## Morren's® Jonagored

This mutation of Jonagold, discovered on a farm in Belgium, has become the most popular Jonagold strain in Europe. Jonagored® develops 100% dark red color at maturity. Fruit stores very well and has good quality.
